

New Updater

Whatever skin you choose it will now have the skin name and version. In this example I am using Amber 1.0. This is where you go to update or change skins.

1. Go to Amber 1.0 and hit select.

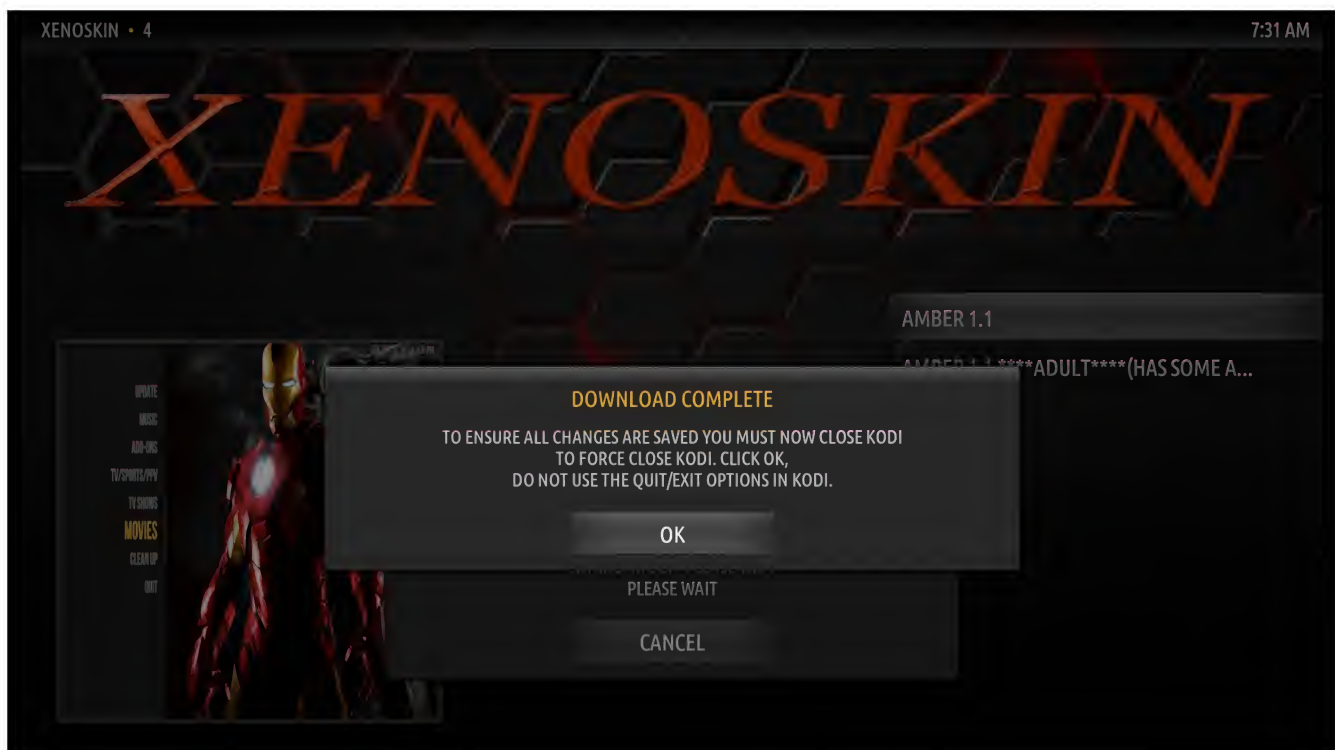

2. Choose whatever skin you want to try, or update your current skin. As you can see Amber 1.1 is available so I am just going to update.

3. Select your skin and wait for it to download.

4. Once finished hit OK on the prompts.

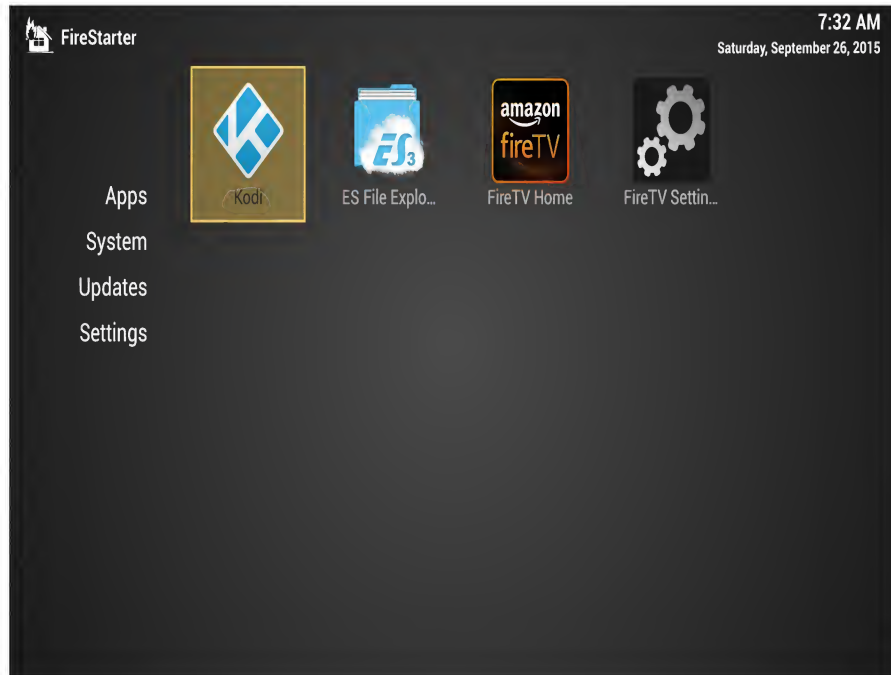

5. Now we just have to force close Kodi and were done. **(You must force close or it will not work)**. You have a few options to do a force close. You can

A. Unplug the power.

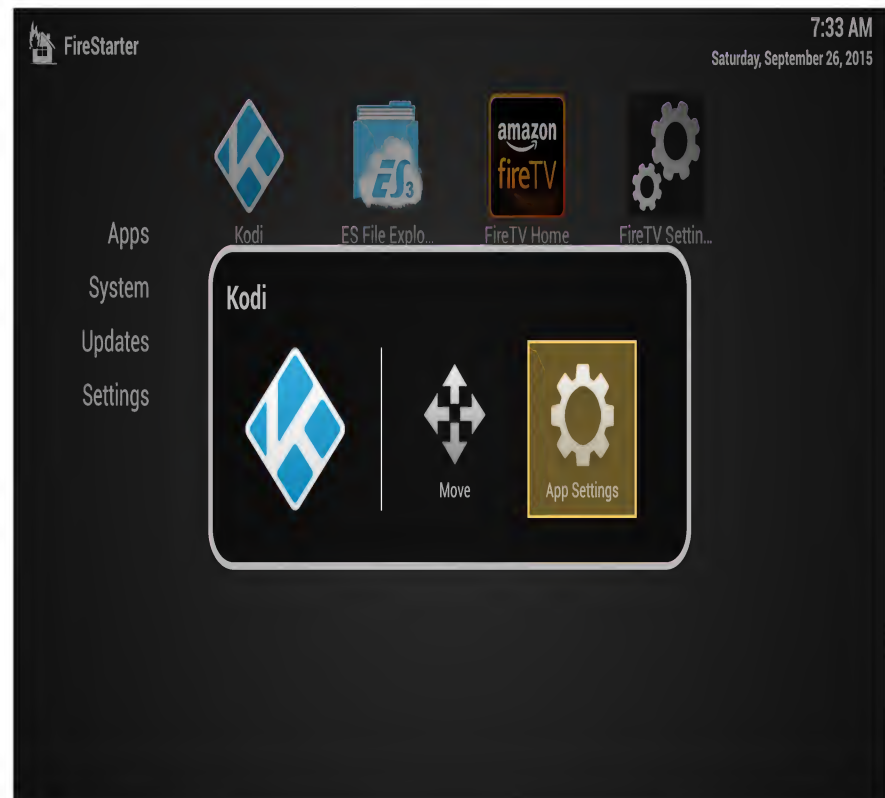

B. Hold select and play to reboot. Or

C. Hit the home button on your remote.

Highlight the Kodi Icon and press the menu button.

Go to app settings and select “Force close”

That's it!. Now just re open Kodi
